

## Automotive Manufacturing at Kimball Solutions

### A Story of a Lasting Relationships and Global Success

Steering and braking are the two most safety critical functions on a vehicle. Both manual drivers and autonomous control systems expect the direction control and deceleration response to be predictable and reliable at all times. The need for fully functional steering control during any event is a prerequisite for ADAS and autonomous vehicles. Kimball Solutions has extensive experience and expertise in producing electronics for automotive steering and braking systems. Steering and braking product assemblies account for a significant percentage of Kimball Solutions' current Automotive business.

### Automotive Focus

1 Steering control

2 Powertrain management for internal combustion engine, electric vehicle, and hybrid

3 Braking and stability control

4 Suspension control

5 Body functions and infotainment
